

DARLING irrigation
making every drop count

**Efficient and sustainable
stock and domestic
water solutions –
*making every drop count!***

www.darlingirrigation.com.au

Rivers, bore drains, ground tanks and natural water holes have for years been utilised by graziers as a valuable source of water for livestock – but times are changing. Now, with pressure to increase farm and water use efficiency and preserve the riparian environment, producers are seeking alternative water delivery solutions.

Darling Irrigation – making every drop count!

Every production system is different and influenced by a unique set of variables – land size, water allocation, rainfall, production objectives and budget to name a few.

Identifying which stock and domestic watering solution is best suited to a particular situation requires a comprehensive understanding of the full range of options available and the know-how to apply and tailor these to meet a specific need.

Darling Irrigation provides advanced stock and domestic watering services and products for agricultural and domestic water users.

With more than 10 years experience in delivering water solutions to meet specific requirements throughout the eastern states, Darling Irrigation is well positioned meet your livestock or domestic water needs.

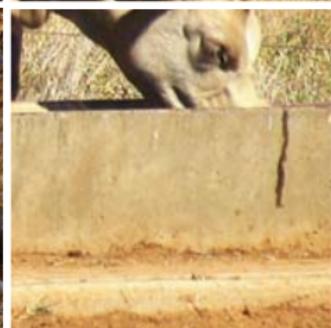

One stop solutions

With experience in small systems right through to complex stock water systems for cell grazing operations, feedlots or multi network systems for capping and piping artesian bores, Darling Irrigation offers 'one-stop solutions' for all of your watering requirements.

When you engage Darling Irrigation to assist with your water delivery project, you are engaging a highly qualified and capable team that will follow a proven process to ensure that your expectations and requirements are met. This process involves a system design phase followed by an installation phase that will help maximise your infrastructure investment.

System design

Your requirements are paramount, Darling Irrigation engages experienced staff members including engineers and technical experts, to tailor a solution to suit your requirements during the design phase. Important issues, such as establishing a correct stock-to-storage ratio to minimise cost and increase water efficiency, are considered during design.

The diverse range of water delivery methods and systems available means that it is often difficult for a business to select the 'right' system. Consideration must be given to elements such as:

- Hydraulic integrity
- Reliability and quality
- Sustainability
- Labour and maintenance
- Legal requirements
- Funding options and budget

These points represent key considerations for land owners redesigning or upgrading their livestock or domestic water potential and Darling Irrigation will work with you to determine which watering system provides the most efficient and cost effective solution to your needs, including:

- Solar pumps, submersible and surface pumps
- Poly pipe and fittings
- Water troughs and tanks
- Trough rails and stock guards
- Water quality and bore capacity testing
- Remote monitoring and telemetry
- Nutrient injection systems

Installation

Once your watering system has been designed, a team of service staff from Darling Irrigation will work through the installation process. Darling Irrigation can handle all aspects of the installation, from excavation and concreting through to pump, trough or tank installation and the trenching and laying of poly pipe.

Darling Irrigation brings together qualified and experienced staff and subcontractors to ensure the seamless installation and commissioning of stock and domestic water solutions – no matter how big or small; complex or simple.

Darling Irrigation client services

Darling Irrigation's commitment to their clients is not limited to design and installation. A well resourced and highly mobile maintenance team is at the ready to assist clients throughout the design and installation phases as well as over the life of the agreed warranty period and beyond. Client services include:

- On-site emergency repairs
- On-site servicing and maintenance
- Pipe trenching and ripping services
- Licenced poly welding
- Accredited water meter installation
- Bore testing and water quality testing services
- Pump repairs in a fully equipped workshop

Darling Irrigation also has extensively stocked retail stores in Narromine, Forbes and Bourke – open five and a half days of the week.
